

ASIA-PACIFIC
SPATIAL EXCELLENCE AWARDS

NATIONAL WINNER

Land Solution Australia & Monitum Herston Quarter

Land Solution Australia, through their monitoring business, Monitum, worked with WatPac Business to provide spatial solutions for a 5-hectare space called the Herston Quarter, with the aim of creating a world-leading benchmark for health precincts.

With its proximity to active medical research labs, hospital wards, and heritage sites, the Herston Quarter project provided plenty of challenges. Monitum used an impressive combination of spatial technology, from data systems to drones and 3D scanning, to assist with Watpac's internal processes and external engagement.

Our judges applauded the way Monitum showed deep insight into the public's perception of the construction industry. The project transformed how construction companies will disseminate and share information in the future.

Monitum and Land Solution Australia were able to gather data on environmental noise, dust, and vibration in real time and make it accessible to Watpac around the clock to deal with any issues as they arose.

This transparent process of openly sharing trusted information and evidence of activity proved an efficient way to navigate complex contractual obligations.

The company's work created a precedent in the way construction can be better managed with spatial information and such transparent processes will help transform culture and relationships on-site.

In all, the judges found that the work goes beyond the technical elements and identifies tangible, industry-wide opportunities.
